PROFESSIONAL SUMMARY

Full-stack developer with hands-on production experience contributing to a multi-tenant EV charging SaaS platform (Spring Boot + Angular) at Zebra Elektronik. Independently designed and built an OCPP gateway admin panel using React, NestJS, and PostgreSQL — including a mock-first API architecture, real-time SSE streams, and JWT auth. Focused on shipping robust, end-to-end features and scalable full-stack solutions.

EXPERIENCE

Full-Stack Developer · Zebra Elektronik Istanbul, Turkey · Jan 2026 – Aug 2026

Contributed to two production Angular + Spring Boot platforms (EZCMP charge management & EZCSMS station management) serving 1,200+ EV charging stations across multiple operator tenants in Turkey. Worked in a cross-functional team of ~20 colleagues across engineering, product, and QA — daily stand-ups, code reviews, and Jira ticket grooming. Shipped ~30 pull requests against a multi-customer monorepo on Bitbucket Pipelines.

- Built an end-to-end manual transaction creation flow (Angular modal + Spring Boot service with CSMS integration, input sanitization, and gift-balance validation) used by support agents to recover failed charging sessions.
- Designed and shipped an automatic transaction-timeout service that auto-closes and invalidates zero-energy charging sessions inactive for >24 h, eliminating a recurring source of stale data in the customer-facing mobile app.
- Fixed a tenant-isolation bug in the mobile card-requests endpoint that exposed other users' RFID requests; resolved a discount-visibility regression where HOME/WORKPLACE EVSE discounts were missing on the mobile station endpoint and targeted discounts were leaking into top-level results.
- Made the corporate-contract "tax office" and "company name" fields inline-editable across the Angular UI, REST endpoint, and ContractService, including request DTO design and CORS configuration.
- Shipped the "Invalid Transactions" filter end-to-end (UI control, query parameter, backend predicate, EN/TR i18n) and replaced a brittle 1-day export window on the websocket message log with a 1000-record cap.
- Hardened production code with multiple NPE / HTTP 500 fixes (getAncestorCPOs, getChildrenCPOs, transaction validation) and implemented SOC-80 % push notification logic with duplicate prevention.
- Enhanced the finance team's first-debt Excel report with account code, balance, phone number, and first-debt date columns; reduced SMS resend cooldowns from 3 min to 60 s after UX feedback.

PROJECTS

OCPP Gateway Admin Panel · Solo Full-Stack Project

Stack: React, Vite, TypeScript, Tailwind CSS, react-router, react-i18next, NestJS, Drizzle ORM, PostgreSQL

- Designed and built a white-label admin console for an OCPP gateway product end-to-end — operators see every station that ever connects, manage tenants and API keys, approve connections, and run gateway-level configuration.
- Implemented a **mock-first API architecture**: a single GatewayApi TypeScript interface backed by both mockApi.ts and realApi.ts, so any drift between mock and real backend is caught at compile time.
- Real-time station/event streaming over Server-Sent Events with a unified subscription handler that works identically in mock and real modes.
- Auth designed around JWT + in-memory token store mirrored to sessionStorage (narrower XSS surface than localStorage) and a centralized gateway:unauthorized event for forced logout.
- Modeled 70+ REST endpoints across tenant management, station registration, OCPP admin commands, configuration mappings, command history, and authentication; added permission-gated routes, route-level error boundaries, and EN/TR i18n.

TECHNICAL SKILLS

Languages

TypeScript JavaScript Java SQL HTML CSS

Frontend

React Angular Tailwind CSS Vite react-router react-i18next

Backend

Node.js NestJS Spring Boot Spring Security JWT Hibernate / JPA jOOQ REST APIs

Database

PostgreSQL MySQL Drizzle ORM Flyway

Tools & CI/CD

Git Bitbucket Pipelines Jira Maven npm Postman

AI & Productivity

Cursor Claude Claude Code AI-Assisted Development

Concepts

Server-Sent Events OCPP Protocol Multi-tenant SaaS CI/CD

LANGUAGES

English · Professional working proficiency

Turkish · Native

EDUCATION

Okan University B.Sc. in Information Systems and Technologies
